

ARCHITECTURAL SERIES
AUDACE

RIMSA

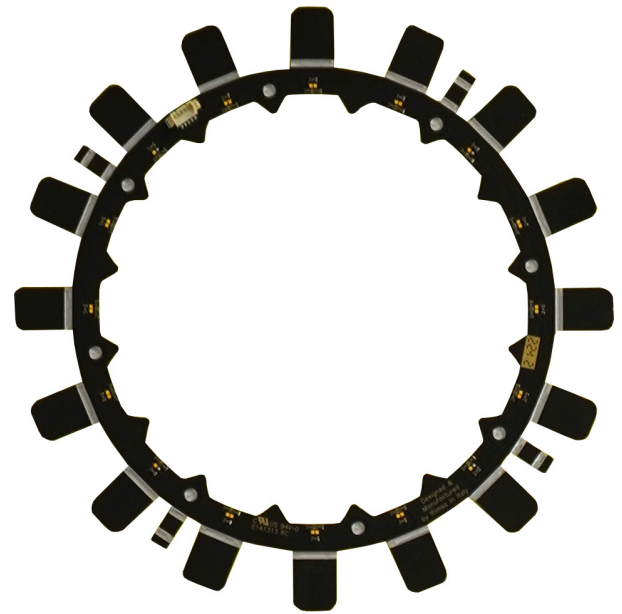

Società Benefit

Since 1936, Rimsa strives towards technological advanced solutions through tireless and visionary research in the lighting field. Audace is the embodiment of this effort, and at the same time exists as a testament of a broader and ever-growing societal attention towards sustainability.

Audace is the most reliable ally for any endeavor.

Its design is solid and grounded, realized through sturdy materials that assure its resilience in any condition and situation. This robust structure is completed by a state-of-the-art technical system specifically developed for Audace.

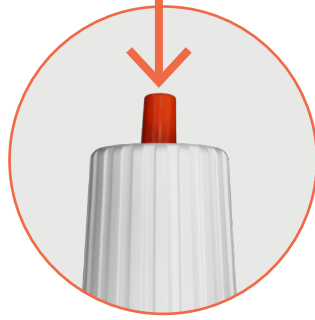

One of Audace's extraordinary features is its application of the principle of indirect lighting: this system completely eliminates the issue of glare, assuring comfort for the eyes. With 28 LEDs carefully soldered onto its PCB, this lamp delivers an outstanding performance, casting 1.800 lux at 50 cm over a 1 meter radius.

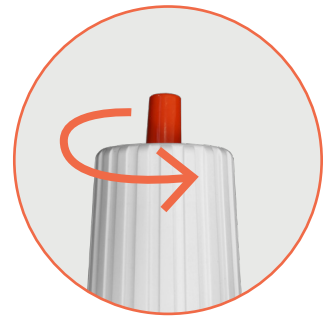

Audace is designed to illuminate your life for years to come: the meticulous selection of materials and its engineered production guarantee a staggering lifespan of over 50.000 hours, while consuming a mere maximum of 13W, showcasing its impressive energy efficiency.

ON / OFF

LIGHT ADJUSTMENT

COLOUR TEMPERATURE

At its core, Audace is designed to be functional and customizable: on the reflector, a stylish orange button grants you complete control of the light. A quick touch turns the lamp on and off, while a longer touch allows you to adjust the intensity (20-100%) to suit your desired level of illuminance. For those seeking to set the mood, simply turn the button to alter the colour temperature of the light, without distorting its colour rendering properties: Audace offers a spectrum of hues to create the perfect ambiance for any occasion, ranging between 2.500 K and 5.000 K.

Illuminate your world with Audace today!
